

## ADVANCED VARIANT MANAGER FOR WIRE SCHEMATIC & HARNESSSES

Arcadia platformArchitect allows engineers to automatically create derivatives of a 150% master design using advanced processing techniques. Each resulting harness will be packaged with its associated artefacts including schematic, formboard drawing and reports.

Dynamically update your variant/option matrix and dynamically regenerate drawings.

Manage your wiring complexity with ease!

# VARIANTMANAGMENT

## FEATURES

Simple to Configure & Manage

Manage different platforms per profile

Advanced Dashboard Management System

Generate Unique Reports per Variant

Advanced Synchronisation between Schematic/Harness

On-the-fly generation one off reports

Streamline Harness Variants for Production Batches

Table-Driven Bundle Lengths Allow Dynamic Cut Length

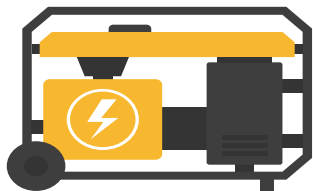

## CREATE OUTPUT AUTOMATICALLY FROM VARIANT MATRIX

Simple, easy to manage Variants & Options Matrix that can pre-configured to generate the desired Schematic & Harness from the 150% design

## PLATFORM ARCHITECT BENEFITS

Traditional methods of managing Harness options and variants is complex and very hard to do reliably, platformArchitect takes away the pain and makes such management reliable and manageable.

## ADVANCED FEATURES

### Dynamic Generation

An entire set of schematic and harness drawings can be generated for a specific variant with correct bundle lengths, wire cut length and content.

### Per-Variant Reports

Manufacturing reports can be generated for each specific build variant aiding manufacture and removing the chance of errors often seen with traditional processes.

### VIN Specific Service Output

In conjunction with the techPubs publishing module you can create specific service publications for every variant of your product avoiding non-specific content.
